2026 California Processing Tomato Report

650 Capitol Mall, Suite 6-100 · Sacramento, CA 95814 · (916) 738-6600 · (855) 270-2722 Fax · www.nass.usda.gov/ca

Released: August 28, 2026 – 12:00 p.m. PDT

2026 PROCESSING TOMATO PRODUCTION

Contracted production for California processing tomatoes is forecast at 10.0 million tons, averaging 54.9 tons per acre. The current production forecast is 10 percent below last year's contracted production of 11.1 million tons, and 1 percent above the May forecast. The projected harvested acreage of tomatoes grown under contract is 182,000 acres, down 4 percent from 2025.

Variable weather patterns throughout the spring and summer affected the uniformity of crop development. This marks the third consecutive year of declining contracted acreage as the industry works to balance inventory levels with market demand.

The processing tomato harvest began in the last week of June, nearly a week earlier than usual, and is expected to conclude before the end of October. Yields are reported to be above average, though they are not expected to reach the record highs achieved in 2025.

The Processing Tomato Advisory Board published shipments through August 22, 2026, showing a 9 percent decrease compared to this time last year.

This processing tomato estimate is funded by the California League of Food Producers.

California's Harvested Processing Tomatoes
Weekly Cumulative Totals for 2022 through 2026

ACREAGE AND PRODUCTION (CONTRACT AND TOTAL) - CALIFORNIA
